SUMMARY

AI Solutions Builder & Creative Director. Eight years producing high-stakes broadcast and video, followed by eight years at Google building production LLM agents and enablement frameworks for its senior engineers.

I built spec work for your accounts before applying. Two finished customer bundles on the ElevenLabs stack, at thestorytellermitch.com/for-elevenlabs. A publisher's 70-word brief becomes a branded audio edition for \$0.38 in logged calls.

Each bundle ships the way an enterprise customer receives it: Flows template packs, an account-executive one-pager, a workshop kit, and full API receipts. I bring the same discipline I used at Cross-Google Engineering, shipping generative-AI pipelines with **operator runbooks** so teams can run them autonomously.

FIT FOR FORWARD DEPLOYED CREATIVE

- **Embed with enterprise customers and find where the tools create the most value:** Sat inside a Google vice president's drafting process for months, extracted the voice rules nobody had written down, shipped a Gemini ghostwriting agent against them, and cut her document review rounds by 70%.
- **Build AI-powered creative workflows tailored to each customer's use cases:** Produced spec work for two distinct customer archetypes on the ElevenLabs stack, a publisher turning articles into branded audio editions and a regional beverage brand shipping one spot across seven language markets, each with its own voice, compliance tier and cost model.
- **Design reusable workflow templates that make adoption stick:** Shipped four Flows template packs across those two bundles, article to audio edition, brand podcast episode, multi-market ad variant and social cutdown, with a mapping of which pipeline stages become Flows nodes and which ElevenLabs model powers each audio node.
- **Educate and train customer teams, running workshops and hands-on sessions:** Wrote a 30-minute newsroom workshop an account executive can run without me, the same handoff discipline I used at Google, where both agents shipped as rule files and operator runbooks the owning teams could edit on their own.
- **Produce case studies that document customer outcomes:** Published a receipts file carrying the request ID for every generation call, plus a no-ship trail recording each gate that rejected a take and what the fix cost, so the cost math and the quality bar are both auditable by the customer.

EXPERIENCE

Communications Lead

Google · Cross-Google Engineering (xGE) | June 2024 - August 2026

Communications Lead for xGE, the org chartered to drive technical change across Google through its 1,000+ most senior engineers.

- **Autonomous editorial systems:** Built and deployed an autonomous **communications-triage agent** on Apps Script and Gemini for xGE's partnership intake from teams and stakeholders, built to route 60% of inbound requests without escalation and scoped to remove 160 hours of annual triage overhead, documented end to end with an operator runbook.
- **Executive voice engineering:** Built a production ghostwriting agent for a vice president on Gemini, anchored on a written voice constitution and a banned-phrase verification step that checked drafts before any person read them.
- **Product and architecture for an internal AI app:** Led product and architecture for My Engineering Journey, an AI mentorship-matching agent and enablement app for the senior engineer community, scoped to cut per-match time from 3.5 hours to under 20 minutes and lift half-year capacity from 15 to 50 matches.
- **Technical storytelling and enablement:** Partnered with Principal, Distinguished and Fellow engineers across Google product areas to shape workshops, presentation content and speaker preparation for xGE Connects, a peer-led career and skills series, plus the 300+ person quarterly all-hands forums.

Senior Communications and Content Strategist

Google · Corporate Engineering (TechStop) | April 2018 - June 2024

Senior communications strategist for Corporate Engineering and its global help desk.

- **Executive ghostwriting and narrative strategy:** Wrote executive communications for the then-Chief Information Officer, translating Corporate Engineering's technical priorities into leadership-ready narrative.

- **Onboarding at scale:** Overhauled Day-One technical orientation into a self-service curriculum delivered to 75,000+ new hires with an 88% customer-satisfaction score.
- **Content campaigns and audience building:** Ran external-facing recruitment and content campaigns for Google's engineering talent brand, generating 1.7 million YouTube views across the portfolio.

Earlier Career

News and Entertainment Production | 2007 - 2018

- **Embedded with another team and changed how it produced:** AJ+, Senior Producer (2016-2018) on the Context desk. Asked to build a third production line, I worked with the real-time team's producers first, then designed a day-of explainer format around what they already did well. The proof-of-concept reached 50 million views, the line became permanent, and three producers I coached went on to host their own programs.
- **Repeatable formats a team runs without you:** Originated editorial franchises and platform-native packaging for an AJ+ audience of 500 million weekly viewers, and ran the weekly content review where engagement and retention fed straight into the next slate.
- **Multilingual production at speed:** Al Jazeera English "The Stream", Founding Team, Associate Producer (2010-2011). Launched the network's social-first live show the afternoon after the **bin Laden** raid broke, and pioneered social-data formats that reached 250 million households and won a Royal Television Society award.
- **Execution with dozens of moving pieces:** Fusion, Senior Producer (2013-2015). Led a 10-person team across one-hour formats, rebuilt a 44-minute **Mandela** special as the news broke, and field produced live from Hong Kong's **Umbrella Revolution**.
- **Message discipline when lawyers are reading:** HuffPost Live, Segment Producer (2012-2013). Handled sensitive crisis communications through sustained **Scientology**-defector coverage under an active attack-the-attacker litigation posture, and line produced continuous coverage of the Boston Marathon bombing.
- **Calm when the plan breaks:** WDRB Fox 41, Line Producer (2007-2008). Called Benazir Bhutto's assassination off the overnight wires, restacked the live morning block on air and drove the control room through the pivot, reporting her death minutes ahead of the national programs.

PROJECTS

- **PictureLock Headless AI Production Studio:** Prototyped a custom integration workflow using ElevenLabs APIs, Node.js, and ffmpeg to automate video generation. A text script goes in and a finished cut comes out, proving the technical ability to build end-to-end API workflows.
- **ElevenLabs Customer Prototyping:** Shipped two customer spec workflows. A publisher's brief becomes a branded audio edition for \$0.38. A Spanish spot exports to six markets for \$0.93 each. Includes Flows templates and full API receipts.
- **Throughline Semantic Pipeline:** Built a Node.js engine that adapts one narrative into nine platform-native assets, each automatically checked against a strict rule set before shipping. This is the exact governance architecture I would hand an enterprise team on day one to prove brand safety.

EDUCATION

BA, Journalism | Indiana University Bloomington | 2007

CERTIFICATIONS

AI Fluency · Claude 101 · Agent Skills · Model Context Protocol | Anthropic | March 2026

CAPABILITIES

- **ElevenLabs stack:** Text to Speech, Dubbing API, Studio, Image & Video, Flows, Sound Effects, Eleven Music v2, ElevenAPI.
- **Generative production:** LLMs (Claude, Gemini), Veo 3.1 Fast, Nano Banana 2 via fal.ai, Deepgram, ffmpeg, motion graphics.
- **Build & Integration:** Node.js, Python, REST API integration, creative production pipelines, multi-agent LLM systems, output gates.
- **Enterprise Enablement:** Agency & enterprise consulting, multilingual localization, reusable workflow templates, operator runbooks.
